

ARCHAEOLOGY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, where an archaeologist reads the ground like a book. The oldest known musical instruments, about 40,000 years old, are flutes of bird bone and mammoth ivory, found in caves in today's Germany. In the cave of Lascaux in France we admire paintings of horses, bison and deer. Cave walls also preserve prints and outlines of human hands – like signatures. In Ethiopia in 1974, an australopithecine skeleton was discovered and named Lucy. She lived about 3.2 million years ago, while the first cities appeared about 10,000 years ago – so Lucy lived 320 times further back. At Laetoli in Tanzania, footprints 3.6 million years old prove that our ancestors already walked on two legs. The remains of dozens of people in Spain's Sima de los Huesos show that humans lived in groups. Animal bones from hunters' camps tell us what people ate, and a child's grave in Africa from 78,000 years ago shows that people cared for their dead. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 **The oldest known musical instruments, about 40,000 years old, are...**
 - a) wooden guitars
 - b) flutes of bird bone and mammoth ivory
 - c) metal drums
 - d) bronze trumpets
2. 🎨 **Famous cave paintings of horses, bison and deer can be found in the cave of...**
 - a) the Colosseum in Rome
 - b) Wieliczka
 - c) Lascaux in France
 - d) Mammoth Cave in the USA
3. 🦴 **The most famous australopithecine skeleton, discovered in Ethiopia in 1974, was named...**
 - a) Ida
 - b) Lucy
 - c) Eve
 - d) Maya
4. 📅 **Lucy lived about 3.2 million years ago, and the first cities appeared about 10,000 years ago. How many times further back in time did Lucy live (rounded)?**

5. 🐾 **Footprints about 3.6 million years old preserved at Laetoli in Tanzania prove that our ancestors already...**
 - a) walked on two legs
 - b) rode on animals
 - c) knew how to swim
 - d) danced in circles
6. 🧑 **The remains of dozens of people found in a cave in Spain (Sima de los Huesos) show that humans back then already...**
 - a) lived alone
 - b) built cities
 - c) lived in groups
 - d) wrote books
7. 💖 **On cave walls you can still see prints and outlines of...**
 - a) cart wheels
 - b) coins
 - c) letters
 - d) human hands
8. 🌿 **Animal bones from hunters' camps tell archaeologists...**
 - a) what people believed
 - b) what people were called
 - c) what people ate
 - d) how people sang
9. ⭐ **One of the oldest known burials is a child's grave in Africa from about 78,000 years ago. It shows that people...**
 - a) had no families
 - b) did not know fire
 - c) cared for their dead
 - d) were loners

PHILOSOPHY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory and look into the minds of the first humans. Since people were making flutes 40,000 years ago, we can suppose that music has been with humans since the dawn of time. Female figurines such as the Venus of Willendorf are often seen by researchers as symbols of fertility and abundance. The ability to talk about things not in front of our eyes, such as tomorrow, is called symbolic thinking. Scientists call us Homo sapiens, which in Latin means wise man, and Homo habilis was named 'handy' because he made simple tools. Shared stories around the campfire helped people build bonds within the group. Planning ahead shows in the fact that people carried tools and raw materials with them, sometimes hundreds of miles. Storms and other natural events were most often explained by spirits and supernatural forces. And flowers and ochre in graves suggest that people may have believed in life after death. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 Since people were making flutes 40,000 years ago, we can assume that music...
 - a) was used only for hunting
 - b) was invented by the Romans
 - c) appeared in the Middle Ages
 - d) has been with humans since the dawn of time
2. 👁 Female figurines such as the Venus of Willendorf are often seen by researchers as symbols of...
 - a) royal power
 - b) fertility and abundance
 - c) war
 - d) merchant wealth
3. 🗨 The ability to talk about things that are not in front of us (such as tomorrow) is called...
 - a) mechanical thinking
 - b) animal thinking
 - c) random thinking
 - d) symbolic thinking
4. 🧑🏫 Scientists call us Homo sapiens, which in Latin means...
 - a) tall man
 - b) handy man
 - c) upright man
 - d) wise man
5. 🔥 Homo habilis got its name ("handy man") because it...
 - a) lit fires with a flint striker
 - b) made simple tools
 - c) was the first to walk
 - d) knew how to swim
6. 🗣 Researchers believe that sharing stories around the fire helped the first humans...
 - a) build bonds within the group
 - b) wage wars
 - c) keep mosquitoes away
 - d) count animals
7. ❤ Prehistoric people's ability to plan ahead can be seen in the fact that they...
 - a) never moved from place to place
 - b) hunted only at night
 - c) did not eat meat
 - d) carried tools and raw materials with them
8. 🌿 Prehistoric people usually explained natural events such as storms by...
 - a) the laws of physics
 - b) spirits and supernatural forces
 - c) the will of the king
 - d) inventions
9. ☆ Flowers and ochre in graves thousands of years old suggest that people may have believed in...
 - a) reincarnation of animals only
 - b) an eternal sun
 - c) the end of the world
 - d) life after death

HISTORY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory – the time before the invention of writing, known to us only from excavations. We divide the Stone Age into the Paleolithic, the Mesolithic and the Neolithic, and the word 'Paleolithic' comes from Greek and means old stone. Homo sapiens appeared in Africa about 300,000 years ago. For thousands of years our species lived in Europe alongside another kind of human – the Neanderthals, who died out about 40,000 years ago. People reached America 20,000 to 15,000 years ago, crossing a land bridge between Asia and Alaska called Beringia. The last Ice Age ended about 12,000 years ago, and Jericho, one of the oldest continuously inhabited places, was surrounded by a wall as early as 10,000 years ago. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 **Prehistory is the period before the invention of...**
 - a) music
 - b) fire
 - c) writing
 - d) the wheel
2. 👁️ **The Stone Age is divided into the Paleolithic, the Mesolithic and the...**
 - a) Neolithic
 - b) Bronze Age
 - c) Antiquity
 - d) Middle Ages
3. 🗨️ **The word "Paleolithic" comes from Greek and means...**
 - a) old stone
 - b) hard stone
 - c) middle stone
 - d) new stone
4. 🗺️ **Homo sapiens appeared in Africa about...**
 - a) 30 million years ago
 - b) 300,000 years ago
 - c) 3 billion years ago
 - d) 3,000 years ago
5. 🚶 **People reached the Americas about 20,000–15,000 years ago by crossing...**
 - a) a land bridge between Asia and Alaska
 - b) Antarctica
 - c) the Atlantic by swimming
 - d) Africa
6. 🧑 **For thousands of years, Homo sapiens lived in Europe alongside another human species:...**
 - a) gorillas
 - b) Neanderthals
 - c) Homo habilis
 - d) australopithecines
7. 💖 **Neanderthals died out about...**
 - a) 4,000 years ago
 - b) 40,000 years ago
 - c) 400 years ago
 - d) 4 million years ago
8. 🍃 **The last Ice Age ended about...**
 - a) 12,000 years ago
 - b) 120 years ago
 - c) 1,200 years ago
 - d) 12 million years ago
9. ⭐ **Jericho, one of the oldest continuously inhabited places, was surrounded by a wall as early as about...**
 - a) 10,000 years ago
 - b) 100 years ago
 - c) 100,000 years ago
 - d) 1,000 years ago

ANSWERS

LINGUISTICS

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when human speech was born. Before language arose, people may have communicated with sounds similar to singing and calling out. The hyoid bone of Neanderthals, similar to ours, suggests that they could speak. On the hunt, information was passed on with gestures and hand signals, which did not scare the game. Names of animals often imitated their calls – this is onomatopoeia, as in the word 'cuckoo'. Language was passed on orally from generation to generation. Dots and lines beside animals on cave walls may be a record of numbers or a calendar, and the notches on the Ishango bone, 20,000 years old, may mean counting. The Vinča signs from the Balkans may be an early form of writing. Polish, Latin and Sanskrit all descend from a common language called Proto-Indo-European. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🚩 Before language developed, people may have communicated with sounds similar to...
 - a) singing and calling out
 - b) writing
 - c) numbers
 - d) musical notes
2. 👁 Marks on cave walls, such as dots and lines next to animals, may be...
 - a) musical notes
 - b) maps of cities
 - c) letters of an alphabet
 - d) a record of numbers or a calendar
3. 🗨 The Neanderthal hyoid bone, similar to ours, suggests that they...
 - a) could speak
 - b) sang like birds
 - c) had no voice
 - d) could write
4. 📏 The Ishango bone (about 20,000 years old) has notches arranged in groups, which may indicate...
 - a) alphabetic writing
 - b) a map
 - c) a toy for a child
 - d) counting
5. 🗨 While hunting, prehistoric people could pass information to each other using...
 - a) letters
 - b) flags
 - c) gestures and hand signals
 - d) telephones
6. 🌐 Many languages of Europe and Asia (such as Polish, Latin and Sanskrit) come from a common ancestor called...
 - a) Proto-Chinese
 - b) Proto-Egyptian
 - c) Proto-American
 - d) Proto-Indo-European
7. 💖 Children learn to speak by listening to adults. It was the same in prehistory: language was passed on...
 - a) in schools
 - b) orally from generation to generation
 - c) on clay tablets
 - d) in books
8. 🌿 Animal names in prehistoric languages often imitated...
 - a) numbers
 - b) the colors of the sky
 - c) the shapes of mountains
 - d) their calls
9. ☆ The Vinča symbols (Balkans, about 5500 BC) are carved signs that...
 - a) are Roman numerals
 - b) are the Latin alphabet
 - c) may be an early form of writing
 - d) are musical notes

LITERARY STUDIES

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when literature had no letters yet. The oldest stories were passed on orally, often in song, because rhythm helped memory. The first stories may have been acted out by the fire like theater, with dancing and animal imitations. In Chauvet Cave, paintings 36,000 years old show lions, rhinos and horses, and hunting scenes may have served as stories and lessons for the young. The Lion-man figurine from Hohlenstein-Stadel joins a human body with the head of a cave lion. In hunters' tales, animals appeared as guides and guardian spirits. Aboriginal Australians have told stories of the Dreaming, the creation of the world, for tens of thousands of years, and creation myths answered the question of where we came from. Some link the myth of a great flood to rising seas after the Ice Age. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 📖 Humanity's oldest stories were passed on...
 - a) on paper
 - b) in newspapers
 - c) orally, often in song
 - d) by email
2. 🎨 The paintings in Chauvet Cave (about 36,000 years old) show, among other things,...
 - a) lions, rhinos and horses
 - b) cars
 - c) people in armor
 - d) cities
3. 🗨️ A story of a great flood appears in the myths of many peoples. Some link it to...
 - a) the fall of Rome
 - b) rising seas after the Ice Age
 - c) a world war
 - d) a volcano erupting on the Moon
4. 🗺️ Hunting scenes on cave walls may have served as...
 - a) road maps
 - b) advertisements
 - c) written laws
 - d) stories and lessons for the young
5. 🎭 The first "stories" may have been acted out by the fire like theater, with...
 - a) metal stage sets
 - b) tickets
 - c) dancing and animal imitations
 - d) microphones
6. 🧑 For tens of thousands of years, Aboriginal Australians have passed on stories about...
 - a) Rome
 - b) the Dreaming (the creation of the world)
 - c) the kings of Europe
 - d) the pyramids
7. 💖 The Lion-man of Hohlenstein-Stadel (about 40,000 years old) is a figurine combining a human body with the head of a...
 - a) eagle
 - b) horse
 - c) cave lion
 - d) fish
8. 🌿 In hunters' stories, animals often appeared as...
 - a) kings of cities
 - b) coins
 - c) machines
 - d) guides and guardian spirits
9. ☆ Creation myths answered the question...
 - a) who rules the city
 - b) how much grain costs
 - c) how to make a wheel
 - d) where we came from

CULTURE AND RELIGION

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first rituals and ornaments. The oldest known beads made of pierced shells are 80,000–100,000 years old, and shells found far from the sea prove that people traded objects with each other. An engraved pattern on ochre from Blombos Cave in South Africa is about 75,000 years old. The figurines from Dolní Věstonice in Czechia, 26,000 years old, are among the oldest objects of fired clay. Cave paintings were made with ochre and charcoal, often in spots with good echo and acoustics. Shamans were go-betweens between people and spirits. The cave bear was a dangerous neighbor and perhaps revered. And Göbekli Tepe in Turkey, with pillars carved with animals, was probably a place for shared rituals. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 Research has shown that cave paintings were often placed in spots with...
 - a) the lowest temperature
 - b) the most light
 - c) the cave entrance
 - d) good echo and acoustics
2. 👁 Cave paintings were made using, among other things,...
 - a) ochre and charcoal
 - b) ink
 - c) wax crayons
 - d) acrylic paints
3. 🗨 In hunting cultures, shamans were...
 - a) traveling merchants
 - b) go-betweeners between people and spirits
 - c) leaders of great armies
 - d) temple builders
4. 🏠 Shell ornaments found far from the sea prove that people...
 - a) lived in the sea
 - b) traded objects with each other
 - c) raised snails in the mountains
 - d) could fly
5. ⚡ The oldest known beads made from pierced shells are about...
 - a) 10 years old
 - b) 80,000–100,000 years old
 - c) 1 million years old
 - d) 100 years old
6. 🏰 Göbekli Tepe in Turkey, with its stone pillars carved with animals, was probably...
 - a) a royal fortress
 - b) a place for shared rituals
 - c) a port
 - d) a tool factory
7. 💖 The engraved pattern on a piece of ochre from Blombos Cave in South Africa, one of the oldest works of art, is about...
 - a) 750 years old
 - b) 7 million years old
 - c) 7,000 years old
 - d) 75,000 years old
8. 🐻 For Paleolithic people, the cave bear was...
 - a) the main source of milk
 - b) a dangerous neighbor and perhaps revered
 - c) an animal for riding
 - d) a tame household pet
9. ⭐ The figurines from Dolní Věstonice in Czechia (about 26,000 years old) are among the oldest objects made of...
 - a) fired clay
 - b) bronze
 - c) iron
 - d) glass

ECONOMICS AND FINANCE

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when the economy was just being born. People traded objects because not every region had valuable raw materials. The most valuable raw material for tools was flint – to get it, people dug shafts and pits in the ground. Obsidian, volcanic glass, was prized for its extremely sharp edges. Exchanging goods for goods without money is called barter. Hunter-gatherers shared their catch with the whole group, because tomorrow someone else might be lucky. Salt was valuable because it let people preserve meat and fish. When people began growing grain, food surpluses meant that some people could take up crafts. And once people began storing supplies, differences in wealth appeared. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 Prehistoric people traded objects such as obsidian because...
 - a) not every region had valuable raw materials
 - b) they liked giving gifts to distant neighbors
 - c) they had to pay taxes
 - d) they had no money but did have banks
2. 👁 The most valuable raw material for tools in the Stone Age was...
 - a) gold
 - b) iron
 - c) flint
 - d) bronze
3. 🗨 Exchanging goods for goods without money is called...
 - a) barter
 - b) taxation
 - c) banking
 - d) credit
4. ⚖ When people began growing grain, food surpluses appeared, thanks to which...
 - a) people went back to hunting
 - b) some people could take up crafts
 - c) everyone stopped working
 - d) trade disappeared
5. 🛖 To get good flint, Stone Age people dug...
 - a) subway tunnels
 - b) oil wells
 - c) irrigation canals
 - d) shafts and pits in the ground
6. 🗿 Obsidian, a volcanic glass, was valued for its...
 - a) extremely sharp edges
 - b) sweet taste
 - c) softness
 - d) ability to float on water
7. ❤ Hunter-gatherers shared their catch with the whole group because...
 - a) they did not like meat
 - b) meat was cheap
 - c) the king ordered it
 - d) tomorrow someone else might be lucky
8. 🌿 Salt was valuable in prehistory because it made it possible to...
 - a) build houses
 - b) light fires
 - c) heal broken bones
 - d) preserve meat and fish
9. ☆ When people began storing supplies, something else appeared too:...
 - a) banks
 - b) the first coins
 - c) payment cards
 - d) differences in wealth

PSYCHOLOGY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory and look into human hearts. Lullabies are very old, because they soothe babies all over the world. Everyone understands smiling and crying, because they are inborn ways of showing emotions. The brain of Homo sapiens is about 3 times larger than the brain of a chimpanzee. Children's handprints in caves show that children took part in group life and art. Dancing together made people feel closer to one another. A Neanderthal skeleton from Shanidar that survived severe injuries suggests that the group cared for the sick. Fear of snakes and spiders may be partly inherited from our ancestors, while curiosity helped people discover new lands and foods. Burials with ornaments show that Stone Age people felt grief for their loved ones. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 **Lullabies and humming to children are probably very old, because they...**
 - a) soothe babies all over the world
 - b) require instruments
 - c) are recorded in caves
 - d) were invented by the Romans
2. 👁 **Children's handprints found in caves show that children...**
 - a) went to school
 - b) took part in group life and art
 - c) worked in gold mines
 - d) never entered caves
3. 🗨 **Smiling and crying are understood by people of every culture because they are...**
 - a) road signs
 - b) inborn ways of showing emotions
 - c) words from a single language
 - d) a Greek invention
4. 🧠 **The brain of Homo sapiens is about 3 times larger than the brain of a...**
 - a) chimpanzee
 - b) whale
 - c) horse
 - d) elephant
5. 💃 **Dancing together as a group, known since prehistory, makes people...**
 - a) fear one another
 - b) feel closer to one another
 - c) forget their language
 - d) become weaker
6. 🦴 **The skeleton of a Neanderthal from Shanidar who survived severe injuries suggests that...**
 - a) the group cared for the sick
 - b) a doctor from the city treated him
 - c) he was a loner
 - d) he lived in a zoo
7. ❤ **Human fear of snakes and spiders may be partly...**
 - a) caused by school
 - b) inherited from our ancestors
 - c) a fashion
 - d) an invention of cinema
8. 🌿 **Curiosity about the world helped prehistoric people...**
 - a) avoid traveling
 - b) discover new lands and foods
 - c) forget things
 - d) sleep longer
9. ☆ **Burials with ornaments show that Stone Age people already experienced...**
 - a) boredom at school
 - b) fear of flying
 - c) grief for their loved ones
 - d) stress at office jobs

EDUCATION

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first school under the open sky. Children learned mainly by imitating adults. Clumsy flint flakes next to perfect ones may mean young people learning the craft. Knowledge of edible and poisonous plants was passed on by word of mouth and demonstration, and children knew dozens of local plants and animals. Young hunters recognized animals by tracks and sounds, and learned to throw a spear with a spear-thrower, the atlatl. Making fire was precious, because it provided warmth, safety and food. According to some researchers, grandmothers helped look after their grandchildren. Childhood was shorter, because children soon had to help the group with its work. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎫 In prehistory, children learned mainly by...
 - a) watching films
 - b) reading books
 - c) taking lessons at school
 - d) imitating adults
2. 👁 Clumsy flint flakes found next to perfect ones in ancient camps may point to...
 - a) plastic toys
 - b) young people learning the craft
 - c) ornaments
 - d) machine errors
3. 📖 Knowledge of edible and poisonous plants was passed on...
 - a) in encyclopedias
 - b) in schools
 - c) by word of mouth and demonstration
 - d) on blackboards
4. 📏 Young hunters learned to recognize animals by their...
 - a) numbers
 - b) descriptions in books
 - c) photos
 - d) tracks and sounds
5. 🦏 Young people in the Paleolithic learned to throw spears with the help of...
 - a) a metal bow
 - b) a spear-thrower (atlatl)
 - c) a catapult
 - d) a rubber slingshot
6. 👥 According to some researchers, grandmothers in hunter-gatherer groups...
 - a) led the group in war
 - b) did not live with the group
 - c) worked in factories
 - d) helped look after their grandchildren
7. ❤ Knowing how to make fire was very valuable because it...
 - a) provided warmth, safety and food
 - b) decorated caves
 - c) was forbidden
 - d) was used for writing
8. 🍃 Hunter-gatherer children knew dozens of...
 - a) letters
 - b) kings
 - c) local plants and animals
 - d) Roman numerals
9. ☆ In prehistory, childhood was shorter because...
 - a) children did not talk
 - b) children soon had to help the group
 - c) there were no toys
 - d) it was forbidden

SOCIOLOGY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory to see how people lived together. Hunter-gatherers formed groups of a few dozen people and lived a nomadic life – they moved with the game and the seasons. A group of families descended from a common ancestor is called a clan. Work was divided so that different people had different tasks. Hunting a mammoth required many hunters working together, and shared singing and drumming could unite people before the hunt. The first farming villages arose near water and fertile land. In Çatalhöyük in Turkey, houses stood wall to wall and were entered through the roof. Defending fields and stores sadly also brought the first conflicts over land. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 **Group singing and drumming among hunters could...**
 - a) unite people before the hunt
 - b) announce elections
 - c) scare away the sun
 - d) summon rain from the sea
2. 🏠 **Çatalhöyük in Turkey (about 7000 BC) was a large settlement where houses...**
 - a) were tents
 - b) were made of stone and had towers
 - c) stood on stilts
 - d) stood wall to wall and were entered through the roof
3. 🗑️ **A group of related families descended from a common ancestor is called a...**
 - a) army
 - b) city
 - c) state
 - d) clan
4. 🧑🏿 **Hunter-gatherers usually lived in groups of about...**
 - a) a few thousand
 - b) a few dozen people
 - c) two people
 - d) a few million
5. 🏠 **Hunter-gatherers were nomadic, which means they...**
 - a) lived on ships
 - b) moved with the game and the seasons
 - c) lived in one house all their lives
 - d) lived in cities
6. 🐘 **Hunting a mammoth required...**
 - a) a metal trap
 - b) many hunters working together
 - c) one strong person
 - d) a bow and gunpowder
7. ❤️ **Work in hunter-gatherer groups was often divided so that...**
 - a) everyone did the same thing
 - b) only children worked
 - c) nobody worked
 - d) different people had different tasks
8. 🌿 **The first farming villages were built close to...**
 - a) deserts
 - b) glaciers
 - c) water and fertile land
 - d) volcanoes
9. ⭐ **With farming, people began defending their fields and stores, which sadly also brought...**
 - a) the first conflicts over land
 - b) the end of disease
 - c) the disappearance of families
 - d) everlasting peace

1. a 2. d 3. d 4. b 5. b 6. b 7. d 8. c 9. a

ANSWERS

LAW

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when law was not yet written down. A group's rules were passed on in stories, songs and customs. Rules followed because 'it has always been so' are called customs. One of the oldest rules of group life was the ban on killing members of one's own group. Anyone who broke the rules could be expelled from the group. Disputes were usually settled by the oldest and most experienced members. Sharing food taught fairness and reciprocity, and hunters did not kill more animals than they needed. Territory borders were marked with piles of stones or notches on trees. When people began farming, they had to settle who owned each field. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 Before written law existed, a group's rules were passed on...
 - a) on bronze tablets
 - b) in stories, songs and customs
 - c) in courts
 - d) in legal codes
2. 🗺 Markers on the borders of hunting territories may have looked like...
 - a) road signs
 - b) maps
 - c) wire fences
 - d) piles of stones or notches on trees
3. 📜 Rules that people follow because "it has always been this way" are called...
 - a) customs
 - b) statutes
 - c) verdicts
 - d) constitutions
4. 🏹 When people began farming, they needed to decide...
 - a) who sang the most beautifully
 - b) who had the best bow
 - c) who owned each field
 - d) who got up first
5. ⚡ A group member who broke its rules could be...
 - a) fired from an office job
 - b) sent to prison
 - c) fined in gold
 - d) expelled from the group
6. 👥 Disputes in hunting groups were most often settled by...
 - a) kings
 - b) police officers
 - c) the oldest and most experienced members
 - d) judges in robes
7. ❤ Sharing food in the group was a rule that taught...
 - a) greed
 - b) fairness and reciprocity
 - c) loneliness
 - d) pride
8. 🍖 Hunters often followed a custom of not killing...
 - a) any animals at all
 - b) more animals than they needed
 - c) birds
 - d) fish
9. ⭐ The ban on killing members of one's own group was...
 - a) a rule only for chiefs
 - b) a Roman invention
 - c) a 20th-century law
 - d) one of the oldest rules of group life

OTHER (HUMANITIES)

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to art galleries hidden in rock. Among the oldest instruments are rattles and drums. Artists painted by the light of lamps burning animal fat, most often large animals. Altamira Cave in Spain is called the 'Sistine Chapel of Paleolithic art' because of the bison painted on its ceiling. The Lascaux paintings are about 17,000 years old and those of Chauvet about 36,000 – so 19 thousand years separate them. Lascaux was closed in 1963 because visitors' breath damaged the paintings. The name 'Venus of Willendorf' comes from a village in Austria. Animal figurines of mammoth ivory were probably worn as amulets. And traces of campfires from 1 million years ago in Wonderwerk Cave in South Africa show that human ancestors already used fire. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎻 The oldest instruments also include...
 - a) violins
 - b) organs
 - c) pianos
 - d) rattles and drums
2. 👁 Altamira Cave in Spain is called the "Sistine Chapel of Paleolithic art" because of the...
 - a) stained-glass windows
 - b) gold ornaments found there
 - c) marble sculptures
 - d) bison painted on its ceiling
3. 🗨 The name "Venus of Willendorf" comes from...
 - a) the name of its maker
 - b) a cave in France
 - c) a Greek fire goddess
 - d) a village in Austria
4. 📏 The Lascaux paintings are about 17,000 years old, and the Chauvet paintings about 36,000 years old. How many thousand years apart are they?

5. 🔦 Cave artists painted by the light of...
 - a) lamps burning animal fat
 - b) beeswax candles
 - c) light bulbs
 - d) flashlights
6. 🚫 Lascaux Cave was closed to tourists in 1963 because...
 - a) visitors' breath damaged the paintings
 - b) bears lived there
 - c) it collapsed
 - d) it was too dark
7. 💎 Carved animal figurines made of mammoth ivory were probably worn as...
 - a) amulets
 - b) coins
 - c) writing tools
 - d) dog toys
8. 🌿 In caves, people most often painted...
 - a) landscapes with rivers
 - b) people in houses
 - c) plants
 - d) large animals
9. ⭐ Traces of fires about 1 million years old in Wonderwerk Cave (South Africa) show that...
 - a) dragons lived there
 - b) human ancestors already used fire
 - c) a volcano erupted
 - d) people invented matches

ARCHITECTURE AND URBAN PLANNING

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first homes. Caves served people as shelters and places for rituals. Hunters built huts from long poles driven into the ground covered with branches, and in cold climates with animal hides. A cone-shaped hut is sturdy because rain runs off its sloping walls. In treeless lands, shelters were made of bones, hides and turf – at Mezhyrich in Ukraine, huts of mammoth bones 15,000 years old were found. In Jericho around 8000 BC, residents together built a stone tower and wall. Houses in Çatalhöyük had walls of sun-dried brick, and Neolithic 'longhouses' in Central Europe were as long as 30–40 m. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🚩 In Ukraine (Mezhyrich), huts about 15,000 years old were discovered, built from...
 - a) mammoth bones
 - b) cut stone
 - c) concrete
 - d) bricks
2. 👁 In cold climates, Paleolithic hunters built shelters covered with...
 - a) roof tiles
 - b) sheet metal
 - c) glass
 - d) animal hides
3. 🗨 Caves served people as...
 - a) schools
 - b) factories
 - c) shops
 - d) shelters and places for rituals
4. 🏠 A cone-shaped shelter is sturdy because...
 - a) it has a flat roof of turf
 - b) it has no entrance at all
 - c) rain runs off its sloping walls
 - d) it stands partly in water
5. 🪦 To build a shelter, hunters stuck into the ground...
 - a) concrete posts
 - b) long poles covered with branches
 - c) stone columns
 - d) steel rods
6. 👥 In Jericho around 8000 BC, the inhabitants worked together to build...
 - a) a pyramid
 - b) a stone tower and wall
 - c) a temple of Zeus
 - d) a royal palace
7. 💖 The houses in Çatalhöyük had walls made of...
 - a) glass
 - b) marble
 - c) steel
 - d) sun-dried brick
8. 🌿 In treeless areas, hunters built shelters from...
 - a) bones, hides and turf
 - b) bricks
 - c) paper
 - d) bamboo
9. ☆ The oldest Neolithic farmhouses in Central Europe, the so-called "longhouses," could be as long as...
 - a) 30–40 m
 - b) 3 m
 - c) 3 km
 - d) 300 m

1. a 2. d 3. d 4. c 5. b 6. b 7. d 8. a 9. a

ANSWERS

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when electricity inspired awe. The first fire probably came from wildfires started by lightning – they were a danger, but also a source of fire. Lightning more often strikes tall, solitary trees, and thunder is the sound of suddenly heated air. Later, people made fire by striking flint against pyrite, an iron-bearing mineral. When hair stands on end after rubbing with fur, that is static electricity. Electric eels and torpedo rays can give electric shocks. Fireflies glow thanks to a chemical reaction in their bodies. And the northern lights seen by hunters in the north appear when particles from the Sun hit the atmosphere. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🦟 **Thunder, which terrified prehistoric people, is the sound of...**
 - a) rocks cracking in the mountains
 - b) giants fighting in the clouds
 - c) suddenly heated air
 - d) falling stars
2. 👁 **The first fire that people used probably came from...**
 - a) wildfires started by lightning
 - b) oil lamps
 - c) matches
 - d) hot springs only
3. 🗨 **When your hair stands on end after being rubbed with fur, the cause is...**
 - a) Earth's magnetism
 - b) gravity
 - c) static electricity
 - d) an echo
4. ⚡ **Lightning more often strikes...**
 - a) tall, solitary trees
 - b) animal burrows
 - c) valleys and caves
 - d) stones in a stream
5. 🔥 **You can start a fire by striking flint against...**
 - a) pyrite (an iron-bearing mineral)
 - b) ice
 - c) wood
 - d) clay
6. 🦋 **Fireflies glowing at night produce light thanks to...**
 - a) sparks from a fire
 - b) a chemical reaction in their bodies
 - c) electricity from a battery
 - d) reflected moonlight
7. 💜 **Electric eels and electric rays can...**
 - a) fly
 - b) talk
 - c) glow like light bulbs
 - d) give electric shocks
8. 🍃 **The auroras that Ice Age hunters saw in the north occur when...**
 - a) ice catches fire
 - b) stars fall
 - c) particles from the Sun hit the atmosphere
 - d) the sea reflects light
9. ☆ **For people, forest fires started by lightning were...**
 - a) a way to travel
 - b) a danger, but also a source of fire
 - c) a punishment for theft
 - d) completely unknown

COMPUTER SCIENCE AND TELECOMMUNICATIONS

**3. Prehistory**

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first ways of sending messages. Hunters signaled to each other by imitating the calls of birds and animals, and fires on hilltops could be used for sending signals to other groups. Messages were left by arranging stones or breaking branches, but between distant groups news was carried mainly by people on the move. The way to a watering hole was remembered by landmarks. Cave paintings were the first way of recording and passing on information, and the notches on the Ishango bone the simplest way of recording numbers. Notches may also have shown the phases of the Moon. Even bees show others the way to flowers – by dancing. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 **Hunters could send signals over a distance by imitating...**
 - a) bells
 - b) the calls of birds and animals
 - c) a phone ringing
 - d) sirens
2. 👁 **Fires on hilltops could be used for...**
 - a) cooking from a distance
 - b) counting stars
 - c) sending signals to other groups
 - d) writing
3. 🗨 **Cave paintings can be seen as the first way of...**
 - a) broadcasting radio
 - b) sending letters
 - c) writing with an alphabet
 - d) recording and passing on information
4. 📏 **Notches on a bone, like the one from Ishango, are the simplest way of...**
 - a) playing music
 - b) writing names
 - c) drawing maps
 - d) recording numbers
5. 📌 **Hunters could leave messages for others by arranging...**
 - a) stones or breaking branches
 - b) letters in mailboxes
 - c) posters
 - d) text messages
6. 🐦 **In prehistory, news between distant groups was carried mainly by...**
 - a) people on the move
 - b) carrier pigeons
 - c) mounted messengers
 - d) notice boards
7. 💖 **To remember the way to a watering hole, hunters relied on...**
 - a) maps drawn on paper
 - b) satellite navigation
 - c) landmarks
 - d) a magnetic compass
8. 🐝 **Animals communicate too: bees show others the way to flowers by...**
 - a) singing
 - b) dancing
 - c) writing
 - d) changing color
9. ⭐ **A hunters' calendar may have consisted of notches showing...**
 - a) the days of the week
 - b) the dates of holidays
 - c) the hours of a clock
 - d) the phases of the Moon

BIOMEDICAL ENGINEERING

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first medical aids. Healed fractures tell us that the injured were fed and protected by the group, and splints could be made of pieces of wood and leather straps. Canes and sticks helped the old and injured with walking. Wounds were dressed with moss and leaves, and bone needles 40,000 years old let people sew clothes and stitch wounds. Holes in skulls with healed edges prove that patients survived trepanation. In Liang Tebo cave on Borneo, a skeleton 31,000 years old was found after a leg amputation the person survived. At Mehrgarh in Pakistan around 7000 BC, people could drill decayed teeth. And the Nariokotome boy from Kenya is one of the most complete skeletons of the species *Homo erectus*. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🚩 **At Mehrgarh (in today's Pakistan) around 7000 BC, people knew how to...**
 - a) vaccinate children
 - b) transplant hearts
 - c) take X-rays
 - d) drill decayed teeth
2. 👁 **Holes in Stone Age skulls with healed edges prove that...**
 - a) these were marks left by horns
 - b) people had a third eye
 - c) the skulls were used as tools
 - d) patients survived trepanation
3. 🗨 **A splint, used to hold a broken limb stiff, could be made of...**
 - a) plaster
 - b) plastic
 - c) metal
 - d) pieces of wood and leather straps
4. 🦴 **Bones with healed fractures tell us that the injured...**
 - a) were abandoned
 - b) went hunting on a broken leg
 - c) were fed and protected by the group
 - d) were treated in a hospital
5. 🎵 **Bone needles (about 40,000 years old) made it possible to...**
 - a) play music
 - b) write
 - c) catch fish only
 - d) sew clothes and stitch wounds
6. 🧑 **In Liang Tebo Cave on Borneo, a skeleton about 31,000 years old was found after...**
 - a) heart surgery
 - b) eye surgery
 - c) a leg amputation the person survived
 - d) a hand transplant
7. ❤ **Sticks and staffs could help older and injured people with...**
 - a) walking
 - b) counting
 - c) writing
 - d) fishing
8. 🌿 **To dress wounds, prehistoric people may have used...**
 - a) cotton gauze
 - b) antibiotics
 - c) adhesive bandages
 - d) moss and leaves
9. ☆ **The Nariokotome Boy (Kenya, 1.5 million years old) is one of the most complete skeletons of the species...**
 - a) australopithecine
 - b) Neanderthal
 - c) Homo erectus
 - d) Homo sapiens

CHEMICAL ENGINEERING

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first chemistry workshops. Red ochre is earth containing iron oxides, and black pigment is charcoal or manganese oxide. In Blombos Cave, 100,000 years ago, ochre was already being mixed in abalone shells. Neanderthals made glue from birch bark tar. Fire turns clay into hard ceramic – this is called firing. Cooking made food easier to digest and safer, and smoking meat and fish let people store food for longer. Hides were preserved when hunters smoked them or rubbed them with fat. Hunters coated arrowheads with poisons from plants and frogs to bring down game more quickly. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🚩 **Red ochre, a pigment used for painting, is earth containing...**
 - a) iron oxides
 - b) carbon
 - c) gold
 - d) salt
2. 👁 **About 200,000 years ago, Neanderthals made glue from...**
 - a) flour
 - b) honey
 - c) synthetic resin
 - d) birch bark tar
3. 🗨 **The process in which fire turns clay into hard pottery is called...**
 - a) fermentation
 - b) melting
 - c) firing
 - d) distillation
4. ⚡ **Cooking food over a fire meant that...**
 - a) it was easier to digest and safer
 - b) food became poisonous
 - c) people had to eat more
 - d) food disappeared
5. 🔥 **To preserve an animal hide, hunters...**
 - a) boiled it in water
 - b) smoked it or rubbed it with fat
 - c) painted it with oil paint
 - d) froze it forever
6. 🧑 **The oldest known "paint workshop," in Blombos Cave (about 100,000 years old), mixed ochre in...**
 - a) abalone shells
 - b) iron pots
 - c) glasses
 - d) plastic cups
7. 💖 **Smoking meat and fish made it possible to...**
 - a) turn it into stone
 - b) store food for longer
 - c) grow it
 - d) increase its weight
8. 🍃 **The black pigment in caves is usually charcoal or...**
 - a) manganese oxide
 - b) tire soot
 - c) pencil graphite
 - d) octopus ink
9. ⭐ **Hunters used poisons from plants and frogs, for example on arrowheads, in order to...**
 - a) preserve meat
 - b) cure diseases
 - c) dye clothes
 - d) bring down game more quickly

CIVIL ENGINEERING AND TRANSPORT

**3. Prehistory**

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first journeys. In the Paleolithic, people traveled mainly on foot, and the first domesticated animal that helped them was the dog. People from Africa reached Europe about 45,000 years ago. To reach Australia they had to cross the sea on boats or rafts. A raft floats because wood is less dense than water, and boats hollowed out of a tree trunk are dugout canoes. Sleds appeared in the north as early as the Stone Age. Hunters followed reindeer herds because the animals migrated with the seasons. When the sea was lower, Britain was joined to Europe by land called Doggerland. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🚣 **Boats hollowed out of a tree trunk are called...**
 - a) fiber kayaks
 - b) galleys
 - c) plastic rafts
 - d) dugout canoes
2. 👁 **People reached Australia about 50,000–65,000 years ago. They had to travel...**
 - a) across the sea on boats or rafts
 - b) across a dry land bridge
 - c) over the ice on foot
 - d) on the backs of whales
3. 📖 **Sleds pulled over snow by people, and later by dogs, appeared...**
 - a) in the 20th century
 - b) in Egypt
 - c) in Rome
 - d) in the north as early as the Stone Age
4. ⚙ **A raft floats because wood...**
 - a) is less dense than water
 - b) has fire inside it
 - c) contains a magnet
 - d) has air in stones
5. 🚚 **In the Paleolithic, people traveled mainly...**
 - a) by wagon
 - b) on foot
 - c) on horseback
 - d) by bicycle
6. 🐾 **The first domesticated animal that helped people travel and hunt was the...**
 - a) horse
 - b) dog
 - c) camel
 - d) elephant
7. ❤ **When sea levels were lower, Great Britain was connected to Europe by land called...**
 - a) Doggerland
 - b) Pangaea
 - c) Beringia
 - d) Atlantis
8. 🍃 **Hunters followed herds of reindeer because...**
 - a) the animals migrated with the seasons
 - b) they were looking for gold
 - c) they liked change
 - d) they were fleeing from cities
9. ☆ **People from Africa reached Europe about...**
 - a) 4.5 million years ago
 - b) 450 years ago
 - c) 4,500 years ago
 - d) 45,000 years ago

MATERIALS ENGINEERING

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the Stone Age, which lasted over 3 million years. The oldest tools were made by knocking flakes off a rock with another stone, striking the core with a stone hammer or antler. A hand axe was shaped like a teardrop, worked on both sides. A scraper was used for cutting and scraping hides. Obsidian makes better blades than granite because it fractures into very sharp edges. Microliths are small blades set into handles. Deer and reindeer antlers were made into harpoons and points. The first strings were twisted from plant fibers. And the flutes from Geißenklösterle were made of vulture bone and mammoth ivory. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎺 The flutes from Geißenklösterle were made of vulture bone and...
 - a) clay
 - b) silver
 - c) mammoth ivory
 - d) bamboo
2. 👁 A hand axe is a stone tool shaped like...
 - a) a teardrop, worked on both sides
 - b) a cube
 - c) a star
 - d) a ball
3. 🗑 A tool for cutting and scraping hides is called a...
 - a) scraper
 - b) trowel
 - c) plow
 - d) bronze sickle
4. 🔪 Obsidian is better for blades than granite because it...
 - a) fractures into very sharp edges
 - b) is heavy
 - c) is colorful
 - d) is soft like wax
5. 🔥 The oldest stone tools were made by...
 - a) casting metal in molds
 - b) knocking flakes off a rock with another stone
 - c) turning clay on a potter's wheel
 - d) forging hot metal
6. 🦌 Deer and reindeer antlers were used to make...
 - a) harpoons and points
 - b) roofs
 - c) cooking pots
 - d) coins
7. 💎 Microliths are...
 - a) small blades set into handles
 - b) metal nails for boats
 - c) huge glacial boulders
 - d) gemstones in crowns
8. 🌿 The first strings were made from twisted...
 - a) plant fibers
 - b) lion hair
 - c) wires
 - d) plastic threads
9. ⭐ The Stone Age lasted...
 - a) 100 years
 - b) over 3 million years
 - c) 1,000 years
 - d) 10,000 years

MECHANICAL ENGINEERING

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first simple machines. The bow and arrow appeared at least several tens of thousands of years ago, and a drawn string vibrates and makes a sound, so the bow also served as an instrument. The atlatl is a spear-thrower – it increases range because it extends the arm like a lever. To light a fire with a fire drill, you had to quickly spin a stick against a board, and in a bow drill the string spun the drill back and forth. Animal traps required planning and group cooperation. Fish were caught with harpoons, nets and hooks. Stone querns show that people processed plants into flour. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 A hunting bow could also serve as a simple instrument, because a taut bowstring...
 - a) vibrates and makes a sound
 - b) glows
 - c) becomes magnetic
 - d) heats up
2. 👁 The bow and arrow appeared at least...
 - a) 1,000 years ago
 - b) in ancient Rome
 - c) in the Middle Ages
 - d) several tens of thousands of years ago
3. 🗡 An atlatl is a...
 - a) type of boat
 - b) shovel
 - c) spear-thrower
 - d) net
4. 🏹 A spear-thrower increases throwing range because it...
 - a) is heavy
 - b) extends the arm like a lever
 - c) has an engine
 - d) has a wheel
5. 🔥 To start a fire with a fire drill, you had to...
 - a) blow on a stone
 - b) quickly spin a stick against a board
 - c) tap a stone on ice
 - d) pour water on the wood
6. 🐾 Animal traps, such as pits with sharpened stakes, required...
 - a) writing
 - b) metal
 - c) electricity
 - d) planning and group cooperation
7. ❤ A bow drill made drilling faster because the bowstring...
 - a) shot sparks
 - b) spun the drill back and forth
 - c) measured time
 - d) pulled a cart
8. 🍃 Prehistoric people caught fish using...
 - a) rods with reels
 - b) harpoons, nets and hooks
 - c) dynamite
 - d) sonar
9. ☆ Stone querns for grinding grain show that people...
 - a) processed plants into flour
 - b) ate only meat
 - c) built watermills
 - d) farmed stones

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first source of energy – fire. Fire in a cave let people survive winter and scare off predators. The shared campfire was the center of group life, because people ate, talked and slept there. To keep it from going out at night, you had to add wood and watch over it, and fire was carried to a new place on smoldering tinder or in a container. On the treeless tundra, the fuel was often animal bones and fat. The crackle of a fire comes from bubbles of gas and moisture in the wood. Archaeologists call the remains of a fire a hearth. And by burning forests, people already changed the landscape in prehistory. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 **The crackling of a campfire is caused by...**
 - a) bubbles of gas and moisture in the wood
 - b) the wind
 - c) forest spirits
 - d) stones
2. 👁 **The oldest source of energy mastered by humans was...**
 - a) fire
 - b) electricity
 - c) steam
 - d) wind
3. 📖 **Archaeologists call the remains of a fireplace a...**
 - a) chimney
 - b) smelting furnace
 - c) hearth
 - d) boiler
4. 📖 **Fire in a cave allowed people to...**
 - a) write on the walls
 - b) fly
 - c) farm fish
 - d) survive winter and scare off predators
5. 🏹 **People carried fire to a new place...**
 - a) on smoldering tinder or in a container
 - b) in a bottle
 - c) in a pocket
 - d) on a stone made of ice
6. 👥 **The shared fire was the center of group life because...**
 - a) elections were held there
 - b) weapons were stored there
 - c) people ate, talked and slept there
 - d) it was forbidden
7. ❤ **To keep the fire from going out at night, people had to...**
 - a) pour water on it
 - b) put ice on it
 - c) add wood and watch over it
 - d) bury it
8. 🌿 **On the treeless Ice Age tundra, the best fuel was often...**
 - a) oil
 - b) coal from mines
 - c) animal bones and fat
 - d) natural gas
9. ⭐ **By burning forests to make room for crops and hunting, people already in prehistory...**
 - a) changed the landscape
 - b) dried up the oceans
 - c) stopped the glaciers
 - d) cooled Earth's climate

ASTRONOMY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory and look at the night sky. The first calendar was most likely based on the phases of the Moon, whose cycle lasts about 29.5 days – so about 12 cycles fit into a year. At Warren Field in Scotland, a row of pits 8,000 years old is seen as one of the oldest lunar calendars. By watching the Moon, people could predict tides. At night hunters found their way by the stars, and in a Lascaux painting some see the Pleiades. When certain stars appeared, birds flew away or returned, and the seasons and the sky told people when to gather fruit or catch salmon. Sunrise at the winter solstice mattered, because from then on the days grew longer. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 Hunters noticed that when certain stars appeared, birds...
 - a) changed color
 - b) flew away or returned
 - c) lost their feathers
 - d) started talking
2. 👁 In a Lascaux painting, some researchers see the star cluster called...
 - a) the Pleiades
 - b) Orion
 - c) the Southern Cross
 - d) the Big Dipper
3. 🗞 The first human calendar was most likely based on the phases of the...
 - a) Moon
 - b) Sun
 - c) Venus
 - d) Mars
4. ➡ Approximately how many full lunar cycles (29.5 days each) fit into one year (365 days)? Give a whole number.

5. 🗺 To find their way at night, hunters could navigate by...
 - a) a compass
 - b) a paper map
 - c) a phone
 - d) the stars
6. 🌅 Sunrise on the shortest day of the year (the winter solstice) was important because...
 - a) from then on the days grew longer
 - b) summer began
 - c) there was an eclipse
 - d) the Moon was born
7. 💖 Hunters could predict the tides by watching...
 - a) the clouds
 - b) the color of the sand
 - c) only seabirds
 - d) the Moon
8. 🍏 Hunters knew when to gather fruit or catch salmon by observing...
 - a) the seasons and the sky
 - b) television
 - c) watches
 - d) wall calendars
9. 🌟 At Warren Field in Scotland, a row of pits (about 8,000 years old) was discovered and is considered one of the oldest...
 - a) rocket observatories
 - b) bronze sundials
 - c) planetariums
 - d) lunar calendars

1. b2. a3. a4. 125. d6. a7. d8. a9. d

MATHEMATICS

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the birth of mathematics. Many peoples first counted on their fingers. The Lebombo bone, 43,000 years old, is a baboon bone with 29 notches. The Ishango bone has groups of 11, 13, 17 and 19 notches, which add up to 60. Rhythm in music, like counting, is based on repetition and regularity. Gatherers had to divide fruit into equal parts, and in trade compare quantities and values. Length was measured with their own steps, feet and hands. Triangles and zigzags on ornaments show an early grasp of symmetry and repetition, and people saw hexagons in honeycombs. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 **Rhythm in music, like counting, is based on...**
a) colors
b) repetition and regularity
c) taste
d) smells
2. 🦋 **The Lebombo bone (about 43,000 years old) is...**
a) a shell necklace
b) a baboon bone with 29 notches
c) a clay tablet
d) a stone calendar
3. 🗨️ **Many peoples first counted on their...**
a) computers
b) calculators
c) abacuses
d) fingers
4. ➡️ **When sharing fruit in their group, gatherers had to be able to...**
a) calculate percentages
b) multiply fractions
c) solve equations
d) divide into equal parts
5. 📏 **To measure length, prehistoric people could use...**
a) a ruler
b) a tape measure
c) a laser
d) their own steps, feet and hands
6. 🗣️ **When trading goods, people had to compare...**
a) sounds
b) smells
c) colors
d) quantities and values
7. ❤️ **Patterns of repeating triangles and zigzags on ornaments show an early understanding of...**
a) exponents
b) symmetry and repetition
c) fractions
d) negative numbers
8. 🌿 **In nature, people saw regular shapes, such as the hexagons in...**
a) river stones
b) clouds
c) honeycombs
d) fire
9. ⭐ **The Ishango bone has groups of notches including ones of 11, 13, 17 and 19. What is the sum of these numbers?**

OTHER (TECHNOLOGY)

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first everyday inventions. The oldest bone needles with an eye are about 40,000 years old. Clothing of hides let people live in cold lands. Spinning thread required twisting fibers on a spindle, and in Dzudzuana cave in Georgia, flax fibers 30,000 years old were found, some of them dyed. Weaving baskets of grass, wicker and bast is called basketry. Rattles of seeds and shells were used for dancing and rituals. The first paints were made of earth, charcoal and fat. The oldest pottery, 20,000 years old, was found in China. The needle, the bow and pots proved so successful that we still use them today. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 **Rattles made of seeds and shells may have been used...**
 - a) for fishing
 - b) for writing
 - c) for dancing and rituals
 - d) for lighting fires
2. 👁 **The oldest known bone needles with an eye are about...**
 - a) 4,000 years old
 - b) 400 years old
 - c) 40,000 years old
 - d) 4 million years old
3. 🗑 **Making baskets woven from grass, wicker and bast is called...**
 - a) pottery
 - b) basketry
 - c) blacksmithing
 - d) glassmaking
4. ➡ **Clothing made of hides allowed people to live...**
 - a) inside volcanoes
 - b) on the Moon
 - c) underwater
 - d) in cold lands
5. ⚡ **Spinning fibers into thread required...**
 - a) boiling stones in water
 - b) twisting fibers on a spindle
 - c) electricity from a battery
 - d) melting metal in a furnace
6. 🧑 **In Dzudzuana Cave in Georgia, flax fibers about 30,000 years old were found, some of them...**
 - a) dyed
 - b) made of gold
 - c) made of plastic
 - d) made of wire
7. ❤ **The oldest known pottery vessels (about 20,000 years old) were found in...**
 - a) Greece
 - b) Egypt
 - c) Brazil
 - d) China
8. 🍃 **People made the first paints from...**
 - a) heavy metals
 - b) plastic
 - c) crude oil
 - d) earth, charcoal and fat
9. ⭐ **Stone Age inventions such as the needle, the bow and pottery were so successful that...**
 - a) computers replaced them
 - b) we still use them today
 - c) they were banned
 - d) they were forgotten

ANSWERS

BIOLOGY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to a world of giant animals. The woolly mammoth's closest living relative is the Asian elephant, and it was protected from frost by thick fur and a layer of fat. The saber-toothed cat, *Smilodon*, had huge upper canine teeth, and in Europe lived the giant deer, with antlers up to 3.5 m across. Many large animals died out at the end of the Ice Age, probably because of climate change and human hunting. The dog descends from the wolf. Our closest living relatives are chimpanzees and bonobos. The name 'australopithecus' means southern ape, and walking on two legs meant our ancestors had their hands free. On the island of Flores lived the 'hobbit', *Homo floresiensis*, who was about 1 m tall. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🦋 Our closest living relatives, which also communicate with calls, are...
 - a) chimpanzees and bonobos
 - b) dolphins
 - c) dogs
 - d) parrots
2. 👁 The saber-toothed cat (Smilodon) had...
 - a) a trunk
 - b) huge upper canine teeth
 - c) armor
 - d) wings
3. 🗨 The name "australopithecus" means...
 - a) water ape
 - b) forest giant
 - c) northern man
 - d) southern ape
4. 🚶 Walking on two legs gave human ancestors, among other things, the advantage that they...
 - a) swam faster
 - b) could fly
 - c) could see in the dark
 - d) had their hands free
5. 🦌 Among the Ice Age animals of Europe lived a deer that was...
 - a) the size of a rabbit
 - b) completely without antlers
 - c) giant, with antlers up to 3.5 m across
 - d) a sea swimmer
6. 🐶 The dog is descended from the...
 - a) fox
 - b) wolf
 - c) jackal only
 - d) hyena
7. ❤ The "hobbit" from the island of Flores (*Homo floresiensis*) was unique because it was...
 - a) tailed
 - b) about 1 m tall
 - c) winged
 - d) three meters tall
8. 🌿 Woolly mammoths protected themselves from the cold thanks to...
 - a) fires lit by humans
 - b) thick fur and a layer of fat
 - c) heated caves
 - d) feathers
9. ☆ Many large animals, such as mammoths and woolly rhinos, died out at the end of the Ice Age, probably because of...
 - a) a lack of water in the oceans
 - b) a meteorite impact
 - c) climate change and human hunting
 - d) a war with dinosaurs

CHEMISTRY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when chemistry was at work in caves, though no one called it that. Shells pierced as beads are made mainly of calcium carbonate. Red ochre becomes even redder when heated. Cave ceilings are often black with soot, because smoke contains carbon particles. Neanderthals made birch bark tar by heating the bark with limited access to air. Wood ash mixed with water makes lye, which helps clean and tan hides. Fruit juice turns into a sour or alcoholic drink through a process called fermentation. Rock salt is a compound of sodium and chlorine. Stalactites form from dripping water with dissolved limestone. And carbon-14 dating works for finds up to about 50,000 years old. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🚩 **Sea snail shells pierced to make beads are made mainly of...**
 - a) silicon
 - b) calcium carbonate
 - c) iron
 - d) gold
2. 👁 **When heated, red ochre becomes...**
 - a) liquid
 - b) green
 - c) even redder
 - d) transparent
3. 🗨 **The process in which fruit juice turns into a sour or alcoholic drink is called...**
 - a) oxidation
 - b) fermentation
 - c) evaporation
 - d) melting
4. ⚖ **Campfire smoke contains carbon particles, which is why cave ceilings are often...**
 - a) black with soot
 - b) green
 - c) shiny
 - d) white
5. 🔥 **To make tar from birch bark, it had to be heated...**
 - a) in ice
 - b) in the sun
 - c) with limited access to air
 - d) in seawater
6. 🧂 **Rock salt is a compound of sodium and...**
 - a) carbon
 - b) iron
 - c) chlorine
 - d) calcium
7. 💖 **Wood ash mixed with water makes lye, which...**
 - a) freezes in summer
 - b) tastes sweet
 - c) helps clean and tan hides
 - d) glows at night
8. 🌿 **Stalactites in caves are formed from...**
 - a) dripping water with dissolved limestone
 - b) ice
 - c) lava
 - d) sea salt
9. ⭐ **Radiocarbon (C-14) dating can date prehistoric finds up to a maximum of about...**
 - a) 5 billion years old
 - b) 50,000 years old
 - c) 5 million years old
 - d) 500 years old

PHYSICS

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when physics was hidden in everyday tasks. An echo in a cave is sound bouncing off the walls. Rubbing two pieces of wood together turns motion into heat, and we feel a campfire's heat from a distance because it gives off thermal radiation. The shadow of a stick, the gnomon, is shortest at noon. A sling throws farther because it extends the swing and boosts speed, and a spear flies more steadily when its weight is closer to the front. A raft of many logs is stable because it has a wide base. Pumice floats because it has many air bubbles. And glaciers moved huge boulders called glacial erratics. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🚩 **An echo in a cave is...**
 - a) sound bouncing off the walls
 - b) the sound of water
 - c) a magnetic phenomenon
 - d) the voice of a ghost
2. 👁 **The shadow of a gnomon (a stick) is shortest...**
 - a) at night
 - b) at dusk
 - c) at noon
 - d) at dawn
3. 🗨 **Rubbing two pieces of wood together turns motion into...**
 - a) water
 - b) moonlight
 - c) birdsong
 - d) heat
4. ➡ **A stone thrown with a sling flies farther than one thrown by hand because the sling...**
 - a) extends the swing and boosts speed
 - b) has a magnet
 - c) reduces gravity
 - d) is lighter than the stone
5. ⚔ **A spear with a stone point flies more steadily when...**
 - a) it is hollow inside
 - b) its point is at the back
 - c) its weight is closer to the front
 - d) it is as short as a finger
6. 🚣 **A raft made of many logs is more stable because it...**
 - a) has an anchor
 - b) is heavier than water
 - c) has a wide base
 - d) has a sail
7. ❤ **The heat of a campfire warms us even from a distance because it...**
 - a) reflects moonlight
 - b) gives off thermal radiation
 - c) makes stones evaporate
 - d) makes the wind blow
8. 🌿 **During the Ice Age, glaciers moved huge boulders known as...**
 - a) volcanoes
 - b) meteorites
 - c) glacial erratics
 - d) stalagmites
9. ☆ **An ordinary stone dropped into water sinks, but pumice floats, because pumice...**
 - a) is made of plastic
 - b) is hot
 - c) has many air bubbles
 - d) is magnetic

ENVIRONMENT

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the Ice Age. Europe was then covered by tundra and steppe, and the ice sheet covered Scandinavia and part of Poland. Sea levels were about 120 m lower, because water was locked up in ice. The landscape of Pomerania and Masuria was shaped by the ice sheet and its meltwater, and the great lake that formed after the ice melted and later joined the ocean is the Baltic Sea. Climate shifts were caused, among other things, by changes in Earth's orbit. The eruption of the Toba supervolcano on Sumatra may have cooled the climate for several years. Hunters had to adapt to the climate, because their food and lives depended on it. And about 10,000 to 6,000 years ago the Sahara was green, with lakes. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🚩 **During the Ice Age, much of Europe was covered by windswept...**
 - a) tundra and steppe
 - b) desert with cacti
 - c) tropical jungle
 - d) savanna with giraffes
2. 👁 **During the last glaciation, the ice sheet covered...**
 - a) Brazil
 - b) Africa
 - c) Scandinavia and part of Poland
 - d) Australia
3. 🗨 **The large lake that formed after the ice sheet melted and later joined the ocean is today's...**
 - a) Caspian Sea
 - b) Dead Sea
 - c) Baltic Sea
 - d) Black Sea, unchanged
4. 📏 **During the Ice Age, sea levels were about 120 m lower because...**
 - a) water was locked up in ice
 - b) the winds blew it away
 - c) water evaporated into space
 - d) the oceans dried up
5. 🌋 **The landscape of Pomerania and Masuria in Poland was shaped by...**
 - a) the ice sheet and its meltwater
 - b) an earthquake
 - c) an ocean
 - d) a volcano
6. 🌍 **About 10,000–6,000 years ago, the Sahara was...**
 - a) a tropical rainforest
 - b) a sea
 - c) green, with lakes
 - d) covered in ice
7. ❤ **Hunters had to adapt to the climate because...**
 - a) they liked changing clothes
 - b) they did not know fire
 - c) they were bored
 - d) their food and lives depended on it
8. 🌿 **The eruption of the Toba supervolcano on Sumatra (about 74,000 years ago) may have...**
 - a) cooled the climate for several years
 - b) flooded Africa
 - c) melted the glaciers
 - d) created the Baltic Sea
9. ⭐ **Climate change in prehistory was caused, among other things, by...**
 - a) airplanes
 - b) factories
 - c) cars
 - d) changes in Earth's orbit

HEALTH

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory and look at the health of early people. Hunter-gatherers walked 10 to 20 kilometers a day. Neanderthal bones show injuries similar to those of rodeo riders. People lived shorter lives because they faced injuries, disease and hunger. Dental tartar tells scientists what they ate, and in a Neanderthal from El Sidrón it held traces of medicinal plants such as chamomile. Foragers' teeth were often healthier than farmers', because they ate less starch and sugar. Farming brought more infectious diseases, because people lived crowded together near animals – that is how measles came to us, from cattle. Singing and dancing may have helped relieve stress and pain. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 **Singing and dancing in rituals may also have helped...**
 - a) heal broken bones
 - b) fight bacteria
 - c) relieve stress and pain
 - d) vaccinate people
2. 👁 **Gatherers' teeth were often healthier than those of the first farmers because they...**
 - a) went to the dentist
 - b) ate less starch and sugar
 - c) had no teeth
 - d) brushed with toothpaste
3. 🗉 **Dental plaque (tartar) from prehistoric people tells scientists...**
 - a) what their names were
 - b) how old they were
 - c) what they ate
 - d) exactly where they lived
4. 🚒 **Farming brought more infectious diseases because people...**
 - a) drank seawater
 - b) lived crowded together near animals
 - c) moved less at night
 - d) did not eat meat
5. 📏 **Every day, hunter-gatherers walked about...**
 - a) a thousand kilometers
 - b) a few hundred meters
 - c) a hundred kilometers
 - d) 10 to 20 kilometers
6. 🦖 **Neanderthal bones show injuries similar to those of...**
 - a) computer programmers
 - b) rodeo riders
 - c) pianists
 - d) sailors
7. ❤ **Prehistoric people lived shorter lives than we do because...**
 - a) they had no calendars
 - b) they faced injuries, disease and hunger
 - c) they got bored quickly
 - d) they did not like living long
8. 🍃 **In the tartar of a Neanderthal from El Sidrón, traces were found of...**
 - a) coffee
 - b) medicinal plants such as chamomile
 - c) chewing gum
 - d) chocolate
9. ⭐ **An example of a disease that passed to humans from domestic animals is...**
 - a) a broken bone
 - b) toothache
 - c) measles (from cattle)
 - d) hay fever

1. c 2. b 3. c 4. b 5. d 6. b 7. b 8. b 9. c

PHYSICAL CULTURE AND SPORT

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when sport was a way to survive. Circle dancing around the fire was one of the oldest forms of shared movement and play. Humans are good long-distance runners because they cool their bodies well by sweating, so they hunted by chasing an animal until it was exhausted. At Engare Sero in Tanzania, footprints show that some people were running. Throwing a spear required strength, accuracy and focus, and children learned by imitating adults' hunts. Swimming was needed to fish and cross rivers, and the 'Cave of Swimmers' in Egypt shows people swimming in what is now desert. And in Lascaux there is a scene showing a man and a bison. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 **Dancing in a circle around the fire was probably one of the oldest forms of...**
 - a) factory work
 - b) learning to write
 - c) shared movement and play
 - d) armed combat
2. 👁 **In Lascaux Cave there is a scene showing...**
 - a) a chariot race
 - b) a man and a bison
 - c) swimmers in a pool
 - d) a soccer match
3. 📖 **Endurance running allowed people to hunt by...**
 - a) ambushing it in water
 - b) catching it in flight
 - c) waiting at home
 - d) chasing an animal until it was exhausted
4. 🏃 **Humans are good long-distance runners because they...**
 - a) cool their bodies well by sweating
 - b) have four legs
 - c) have fur
 - d) have wings
5. 🎮 **Children in hunting groups learned through play, for example by...**
 - a) riding bicycles
 - b) imitating adults' hunts
 - c) playing soccer
 - d) reading comics
6. 🧑 **At Engare Sero in Tanzania, footprints of a group of people from about 10,000–19,000 years ago have survived. Some prints show that the people were...**
 - a) running
 - b) swimming
 - c) walking on stilts
 - d) riding horses
7. 💖 **Throwing a spear during a hunt required...**
 - a) nothing but luck
 - b) strength, accuracy and focus
 - c) heavy boots
 - d) great height
8. 🌿 **Prehistoric people needed to swim in order to...**
 - a) go scuba diving
 - b) play water polo
 - c) fish and cross rivers
 - d) compete in the Olympics
9. ☆ **The "Cave of Swimmers" in the Sahara (Egypt) is interesting because it shows...**
 - a) people on skis
 - b) boats with sails
 - c) people swimming in what is now desert
 - d) fishermen with nylon nets

MEDICINE

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the beginnings of medicine. Shamans healed with drums, singing and dancing. A hole cut into the skull of a living person is called trepanation. The study of diseases of past humans and animals is paleopathology – it tells us, for example, about joint degeneration. A healed thighbone proves that someone cared for him for weeks, and the Neanderthals of Shanidar survived severe wounds thanks to care from group members. Grooves from 'toothpicks' on teeth show that Neanderthals tried to ease toothache. Sick chimpanzees chew bitter leaves – the first humans may have done the same. Bleeding was stopped with moss, spider silk or ash. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 In healing rituals, shamans used...
 - a) drums, singing and dancing
 - b) injections
 - c) pills
 - d) a stethoscope
2. 👁 Cutting a hole in the skull of a living person is called...
 - a) amputation
 - b) transfusion
 - c) vaccination
 - d) trepanation
3. 🗨 The word "paleopathology" means the study of...
 - a) diseases of past humans and animals
 - b) treating dinosaurs
 - c) plant diseases
 - d) herbal medicines
4. 🦴 A healed thigh bone fracture in an ancient human is evidence that...
 - a) he did not eat
 - b) someone cared for him for weeks
 - c) he was immortal
 - d) he could fly
5. 🦷 Neanderthal teeth show grooves from "toothpicks," which they probably used to...
 - a) catch fish
 - b) ease toothache
 - c) start fires
 - d) sew clothes
6. 🧑‍🦰 The Neanderthals of Shanidar survived severe wounds thanks to...
 - a) doctors from the city
 - b) antibiotics
 - c) hospitals
 - d) care from group members
7. ❤ Chimpanzees sometimes chew bitter leaves when they are sick. The same may have been done by...
 - a) the first humans
 - b) insects
 - c) dinosaurs
 - d) fish
8. 🍃 To stop bleeding, people may have applied...
 - a) moss, spider silk or ash
 - b) adhesive bandages
 - c) ice from a freezer
 - d) gauze
9. ☆ Ice Age human and animal bones show evidence of diseases such as...
 - a) smog-related illness
 - b) joint degeneration
 - c) eyestrain from screens
 - d) diabetes from sweets

PHARMACY

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to nature's first pharmacy. Many researchers think the first 'doctors' were shamans and herbalists. Medicinal plants were told apart from poisonous ones through the observation and experience of many generations, and this knowledge was passed on by word of mouth. Herbs were crushed with stones and soaked. Willow bark contains salicin, a substance that relieves pain. Some ritual plants could alter states of consciousness. Honey was food and a remedy for wounds, and clay was eaten because it can help with poisoning. In a grave at Shanidar, flower pollen was found that some considered medicinal herbs placed with the dead. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🏹 **Some plants used in shamanic rituals could...**
 - a) replace food
 - b) heal fractures
 - c) dye hair
 - d) alter states of consciousness
2. 🌿 **Willow bark, which people may have chewed for ages, contains a substance that...**
 - a) sweetens
 - b) dyes
 - c) relieves pain
 - d) glues
3. 📖 **People passed on knowledge of medicinal plants...**
 - a) on the internet
 - b) in books
 - c) in prescriptions
 - d) by word of mouth
4. 📖 **People told medicinal plants apart from poisonous ones thanks to...**
 - a) reading the stars
 - b) instructions on the package
 - c) laboratory analysis
 - d) the observation and experience of many generations
5. 🔥 **To prepare herbs, people...**
 - a) melted them in fire
 - b) froze them
 - c) crushed them with stones and soaked them
 - d) ground them in machines
6. 🐝 **Flower pollen was found in a grave at Shanidar, and some interpreted it as...**
 - a) a trace of bees
 - b) medicinal herbs placed with the dead
 - c) food
 - d) plastic ornaments
7. ❤️ **For prehistoric people, honey was...**
 - a) fuel
 - b) a dye
 - c) food and a remedy for wounds
 - d) poison
8. 🌿 **Animals and people sometimes ate clay because it can...**
 - a) taste sweet
 - b) glow
 - c) help with poisoning
 - d) replace water
9. ⭐ **Many researchers think the first "doctors" were...**
 - a) licensed surgeons
 - b) shamans and herbalists
 - c) priests of Rome
 - d) pharmacists in drugstores

AGRICULTURE

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to the end of prehistory, when people began to sow. The Neolithic Revolution was the shift from hunting and gathering to farming, herding and settled life – people settled in one place. The first grains were grown in the Fertile Crescent in the Middle East, and the first farm animals after the dog were sheep and goats. Rice farming began about 9,000 years ago by the Yangtze River in China. Soil was loosened with digging sticks and hoes, and a sickle with flint inserts was used for cutting ears of grain. Farmers chose seeds from the best plants, so crops became more and more abundant. Harvests were celebrated with dancing, singing and feasting. But in years of drought, hunger and crop failure threatened. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎊 The first farmers probably celebrated the harvest with...
 - a) fasting
 - b) dancing, singing and feasting
 - c) work
 - d) silence
2. 👁 Grain was first cultivated in...
 - a) North America
 - b) the Fertile Crescent in the Middle East
 - c) Australia
 - d) Scandinavia
3. 🗡 A sickle with flint inserts was used for...
 - a) sewing
 - b) starting fires
 - c) fishing
 - d) cutting ears of grain
4. ➡ Farmers chose seeds from the best plants for sowing, so that...
 - a) the seeds disappeared
 - b) plants grew upside down
 - c) crops turned wild
 - d) crops became more and more abundant
5. ⚙ To loosen the soil, the first farmers used...
 - a) digging sticks and hoes
 - b) excavators
 - c) tractors
 - d) steel plows
6. 🐕 The first domesticated farm animals (after the dog) were...
 - a) horses and camels
 - b) chickens and turkeys
 - c) rabbits
 - d) sheep and goats
7. ❤ The shift to farming meant that people...
 - a) stopped working
 - b) went to live at sea
 - c) started roaming
 - d) settled in one place
8. 🌿 The Neolithic Revolution was the shift from gathering and hunting to...
 - a) machine-based industry
 - b) sea trade
 - c) farming, herding and settled life
 - d) alphabetic writing
9. ⭐ Farming also brought problems: in years of drought people faced...
 - a) hunger and crop failure
 - b) glaciers
 - c) floods of fire
 - d) volcanoes

VETERINARY SCIENCE

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, when humans befriended animals. Domestication is a process in which animals get used to humans over generations – people had to feed and protect them for many generations. The dog was useful to hunters because it barked to warn of enemies, and it has a better sense of smell than humans. The friendship paid off for both: people gave food, and dogs gave protection. In a grave at Bonn-Oberkassel, people were buried together with a dog; the puppy survived a serious illness only because people fed it and kept it warm. Shared graves suggest that the dog was a member of the family. Cats settled near people because they caught mice in granaries. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎵 The dog was useful to hunters because it...
 - a) repelled mosquitoes with its scent
 - b) played the bone flute
 - c) barked to warn of enemies
 - d) could count the game
2. 👁 In a grave at Bonn-Oberkassel (about 14,000 years old), people were buried together with a...
 - a) horse
 - b) cat
 - c) dog
 - d) bird
3. 🗨 Domestication of animals is a process in which...
 - a) people live like animals
 - b) animals get used to humans over generations
 - c) wild animals learn to talk
 - d) animals build houses
4. 🏠 The puppy from Bonn-Oberkassel survived a serious illness only because...
 - a) people fed it and kept it warm
 - b) it was very strong
 - c) it never got sick
 - d) it lived alone
5. 🐾 To domesticate an animal, people had to...
 - a) lock it in a cave for a day
 - b) catch it just once
 - c) feed and protect it for many generations
 - d) paint it
6. 🐱 Cats began living close to humans about 9,000–10,000 years ago because they...
 - a) pulled sleds
 - b) caught mice in granaries
 - c) guarded sheep
 - d) gave milk
7. ❤ Friendship with dogs benefited both sides because...
 - a) people gave food, and dogs gave protection
 - b) dogs built shelters
 - c) dogs gave milk
 - d) people taught dogs to write
8. 🌿 Compared with humans, dogs have a better sense of...
 - a) smell
 - b) speech
 - c) color vision
 - d) numbers
9. ☆ Shared graves of people and dogs may show that...
 - a) dogs were disliked
 - b) dogs were gods
 - c) dogs were dangerous
 - d) the dog was a member of the family

ANIMAL SCIENCE AND FISHERIES

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the first herders and fishers. Herders called their flocks with shouts and whistles. The aurochs, the wild ancestor of cattle, was much larger than today's cow, and the ancestor of the domestic pig is the wild boar. Herding gave steady access to meat, milk and wool. Domestication changed how animals looked – dogs got floppy ears and shorter snouts. Today the most numerous domesticated animals in the world are chickens. Fish were caught with stone weirs and woven traps, and salmon swimming upriver were easy and plentiful food. Shell heaps by seaside settlements show that people ate lots of mussels and oysters. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 📞 **Herders have long called their flocks with...**
 - a) a phone
 - b) shouts and whistles
 - c) a megaphone
 - d) a doorbell
2. 👁 **The aurochs, the wild ancestor of cattle, was...**
 - a) striped
 - b) hairless
 - c) smaller than a goat
 - d) much larger than today's cow
3. 🐷 **The wild ancestor of the domestic pig is the...**
 - a) hippopotamus
 - b) wild boar
 - c) tapir
 - d) beaver
4. ⚡ **Raising animals gave people a steady supply of...**
 - a) electricity
 - b) gold
 - c) meat, milk and wool
 - d) paper
5. 🐟 **People caught fish in rivers by building...**
 - a) fishing trawlers
 - b) submarines
 - c) concrete dams
 - d) stone weirs and woven traps
6. 🏠 **Heaps of shells near ancient seaside settlements (shell middens) show that people ate a lot of...**
 - a) corn
 - b) potatoes
 - c) mussels and oysters
 - d) bananas
7. 💖 **Domestication changed animals' appearance; dogs, for example, developed...**
 - a) extra legs
 - b) floppy ears and shorter snouts
 - c) wings
 - d) scales
8. 🍷 **For hunters, salmon swimming upriver were...**
 - a) a symbol of war
 - b) easy and plentiful food
 - c) poisonous fish
 - d) pets
9. ⭐ **The animals domesticated in prehistory that are the most numerous in the world today are...**
 - a) horses
 - b) elephants
 - c) camels
 - d) chickens

OTHER (NATURE)

3. Prehistory

5 m years ago – 5000 BC

Let's travel back to prehistory, to the journeys of people and animals. DNA research tells us that all modern humans descend from ancestors in Africa. The first people moved into Asia along coastlines and river valleys. Beringia is the name of the land linking Asia with America. The Tautavel Man in France, 450,000 years ago, belonged to the species *Homo heidelbergensis*, and the Denisovans were discovered through DNA from a finger bone. Hunters imitated animal calls to lure the game. Most species that ever lived on Earth have gone extinct. A mammoth trapped in permafrost can keep its skin, hair and even blood. Supporters of bringing mammoths back say they could help protect the tundra. Remember these details – I'll ask you about them in a moment.

Read the story aloud. On the back: 9 questions – the answers are in the text.

Place: the field your pawn stands on – link it to the story, or use the app to hear that field's own story.

1. 🎭 **Hunters could imitate animal calls in order to...**
 - a) lure the game
 - b) act in a theater
 - c) talk to it
 - d) always scare it
2. 👁 **Tautavel Man in France lived about 450,000 years ago and belonged to the species...**
 - a) Homo heidelbergensis
 - b) Homo floresiensis
 - c) australopithecus
 - d) Homo sapiens
3. 🗨 **"Beringia" is the name of...**
 - a) a constellation
 - b) the land linking Asia with America
 - c) an island in Greece
 - d) a river in Africa
4. 🌊 **Most species that have ever lived on Earth...**
 - a) live only in the seas
 - b) never existed
 - c) have gone extinct
 - d) are still alive today
5. 🏹 **The first humans traveled from Africa to Asia most likely by moving along...**
 - a) the Arctic ice
 - b) the sea floor
 - c) the Atlantic
 - d) coastlines and river valleys
6. 🧬 **Thanks to DNA research, we know that all modern humans...**
 - a) come from Mars
 - b) descend only from Neanderthals
 - c) descend from ancestors in Africa
 - d) belong to different species
7. 💖 **The Denisovans are an extinct human group discovered thanks to...**
 - a) a cave painting
 - b) a satellite photo
 - c) a legend
 - d) DNA from a finger bone
8. 🌿 **A mammoth trapped in permafrost can preserve...**
 - a) skin, hair and even blood
 - b) clothes
 - c) only a tooth
 - d) gold ornaments
9. ⭐ **Scientists are debating whether to bring mammoths back using genetic engineering. Supporters say that they...**
 - a) would make good pets
 - b) would learn to talk
 - c) would generate electricity
 - d) could help protect the tundra
